

Dear All

The time is here to treat your hives.

All Hives on HBKA Apiaries MUST be treated, as per the Apiary Rules.

The treatment is APIGUARD.

The treatment period should start between the 09/08/2009 and 09/09/2009.

The treatment period is SIX weeks as per instructions.

Please put a note on the outside of the hive with the date the treatment started,so I can see when people started treatment.

I reserve the right as Apiary Manager to Monitor the treatment of hives on HBKA Apiaries, and if required open up Hives to check if treatment has been used.

It has been decided by committee that failure to comply with the treatment requirements will mean that the Hive Owner will be asked to remove the Hive from the Apiary on the 10/09/2009.

There is Apiguard for sale at the Apiary at the Price of £3.80 per treatment, which consists of two (2) trays.
